in collaboration with Alexander Herrebout  
2007 : Archiprix, nomination, Dredge landscape park,  
in collaboration with Alexander Herrebout  
2006-2007 : Copijn tuin- en landschapsarchitecten, Landscape Architect

### **Specialisms**

Research, Park design

### **Election of projects at HOSPER**

#### **Perm Embankment City Park**

Perm's most important public space will be reorganised in the first implementation project pursuant to the Perm Master Plan. The park is in a beautiful location next to the River Kama. The park will be designed in collaboration with KCAP. The design is inspired by the park's specific location, with a large difference in height between the city and the river, and by the time at which the ice breaks in the spring. The inclined area of the park between the city balcony and the boulevard at the water's edge will be made more exciting. A new entrance will be positioned at the site of the city's origins that abuts the park. All the furniture for the park (fencing, benches, lighting, etc.) has been designed specifically for the location, 2009 - to date.

#### **Design experiment for agrarian commercial structures in the province of Overijssel released for other purposes**

Commissioned by Het Oversticht, a design study was undertaken of three places in the province of Overijssel where farms were to fulfil another function in the future. In cooperation with the architectural bureau ONIX, 2004.
