

### Garden Amstelveen Zonnehuis Care Home

Town dwellers need high-quality green space to enhance their living experience. Hosper has produced a proposal for development of the grounds of the Zonnehuis care home in Amstelveen into a lively green pedestrianized area. The various buildings on the site are linked by a square paved in a distinctive design housing a number of richly planted green oases and play and other facilities. The outside space surrounding the care complex consists of gardens with perennial plants and a greenhouse where residents can garden. The two halves of the care complex are connected by a covered pergola designed jointly by Hosper, Architectuurcentrale Thijs Asselbergs and Octatube. One special feature is that the entire grounds of the care home – with the exception of the dementia-friendly gardens – are freely accessible to residents of the surrounding neighborhood.
